STUDENT NAME: Thuayyib .TC		TOTAL MARKS OBTAINED
CLASS:	SUBJECT:	16/25
ROLL NO:	DATE: 30/09/2026	

5.76/9

5) file = open ("sample.TXT", "w")
file.write ("data handling and visualisation\n")
file.write ("Python is used for data analysis.\n")
file.write ("visualisation helps in understand data.\n")
file.close()
print ("data written succesfully.")
write() is used to write data into the file
In memory the text is a new file
close() the file after writing.

2) structured data is for a fixed and defined structure it is usually stored in a row and column such as an relational data base.

eg:-

Structure ID	name	age
001	Zain	10
002	Shuhaib	12

3) non relational database is a type of database which does not retrived for the store in traditional table it is also called non-sql database
eg:- mangodb
file base.

4) Insert:- insert Command is used to add new records in a table eg:- insert into student (ID, name, eg, values ('101', "Rahul", 20)

Create:- Create in a Sql Command used to Create data base table and table structure.
eg:- Create table student(
name varchar (10), age int, Course varchar (20));

Delete:- it is a SQL Command used to delete value from a table.
eg:- Delete name from student
where name = i

1) file = open ("data.txt", "w")
file.write ("first line \n")
file.write ("second line \n")
file.write ("third line \n")
file.close()
Read file = open ("data.txt", "r")
Contents, file.read
print (contents)
file.close()

write = file = sample txt "r"
write = used to write
file = open (sample txt "w")
file.write (this is a sample text
data = file.close ()
("print data succesfull")

2) API - application programming interface it is a set of rule that allow two defined structure application to communicate each other.

Advantages : it is easy to get, more efficient, allow application get and sent data.
eg : Google, whether application.

3) Classification data based data

Primary data

Primary data is collectly directly by the researchers for specific purpose. it is orginal and collected for the first time

eg : Survey, interviews, observation.

Secondary data

it is the data has been already collected by some one else for another purpose and recied by researchers

internal data

it is the data inside the organisation which is collected inside.

eg : employee, record, student mark.

External data

data that outside organisation it also the secondhand data
